

# Assessment (“tax”) units

Sanja Vujackov

UNU-WIDER Training course

29 February – 4 March 2016, Johannesburg, SOUTH AFRICA

# Outline

1. Why we need and how we use them?
2. What are the Tax units?
3. Members of the Tax unit
4. Types of Tax units
5. How we create/name them?

# 1. Why we need and how use them?

- The **implementation** of countries' **tax-benefit systems** usually requires assessment units
- Different **policy instruments**, e.g. child benefits, require a specific type of the assessment unit
- EUROMOD assessment units also **contain definitions** of e.g. who is a dependent child, who is the head of the unit, income of the partner, etc. – **additional information** of the policy
- **Calculations in functions** are done for a specific assessment unit only

## 2. What are the Tax units?

Household members

Household

Single household

## 2. What are the Tax units?

Household members

Household

Partners

## 2. What are the Tax units?

Household members

Household

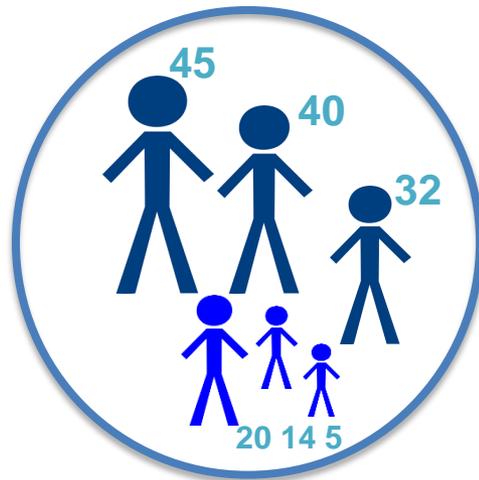

Family

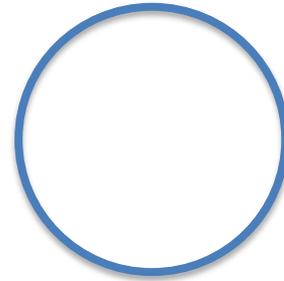

## 2. What are the Tax units?

**Unit:** group of household members to be considered together

Household

Family

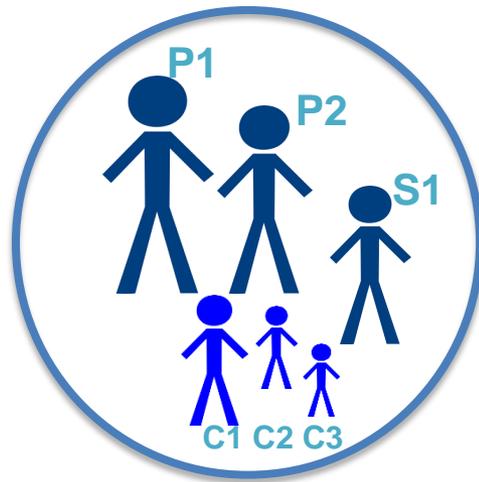

One Tax unit  
= the oldest member

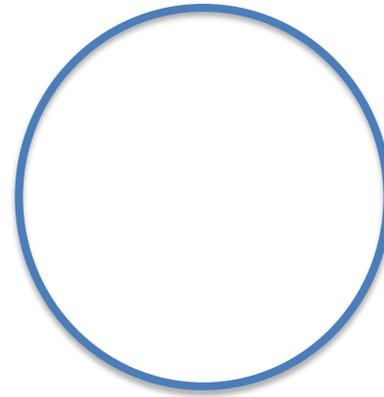

## 2. What are the Tax units?

**Unit:** group of household members to be considered together

Household

Family

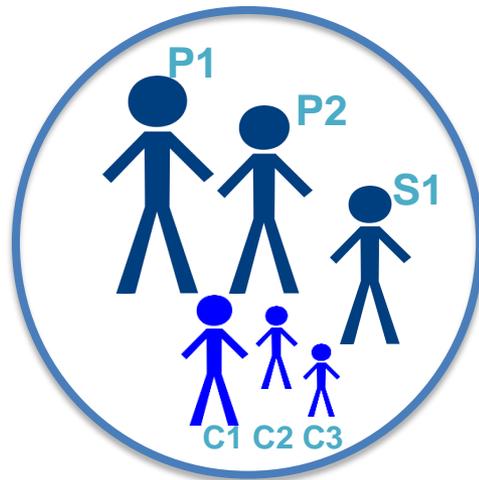

Second Tax unit =  
partners (P1 and P2)

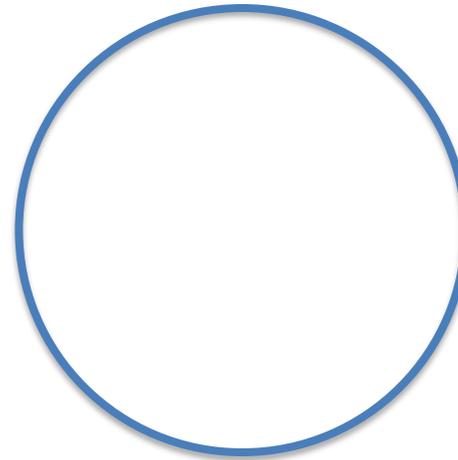

## 2. What are the Tax units?

**Unit:** group of household members to be considered together

Household

Family

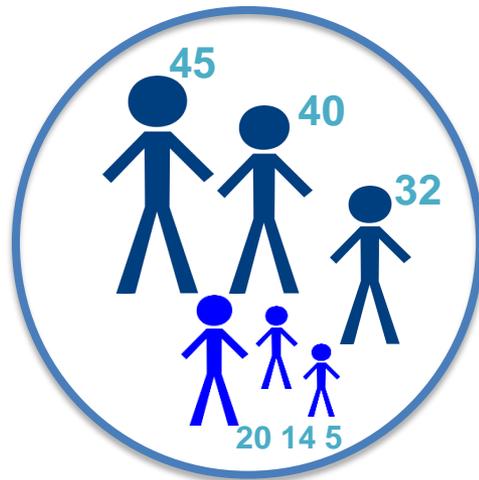

Third Tax unit = couple  
and their children

## 2. What are the Tax units?

**Unit:** group of household members to be considered together

Household

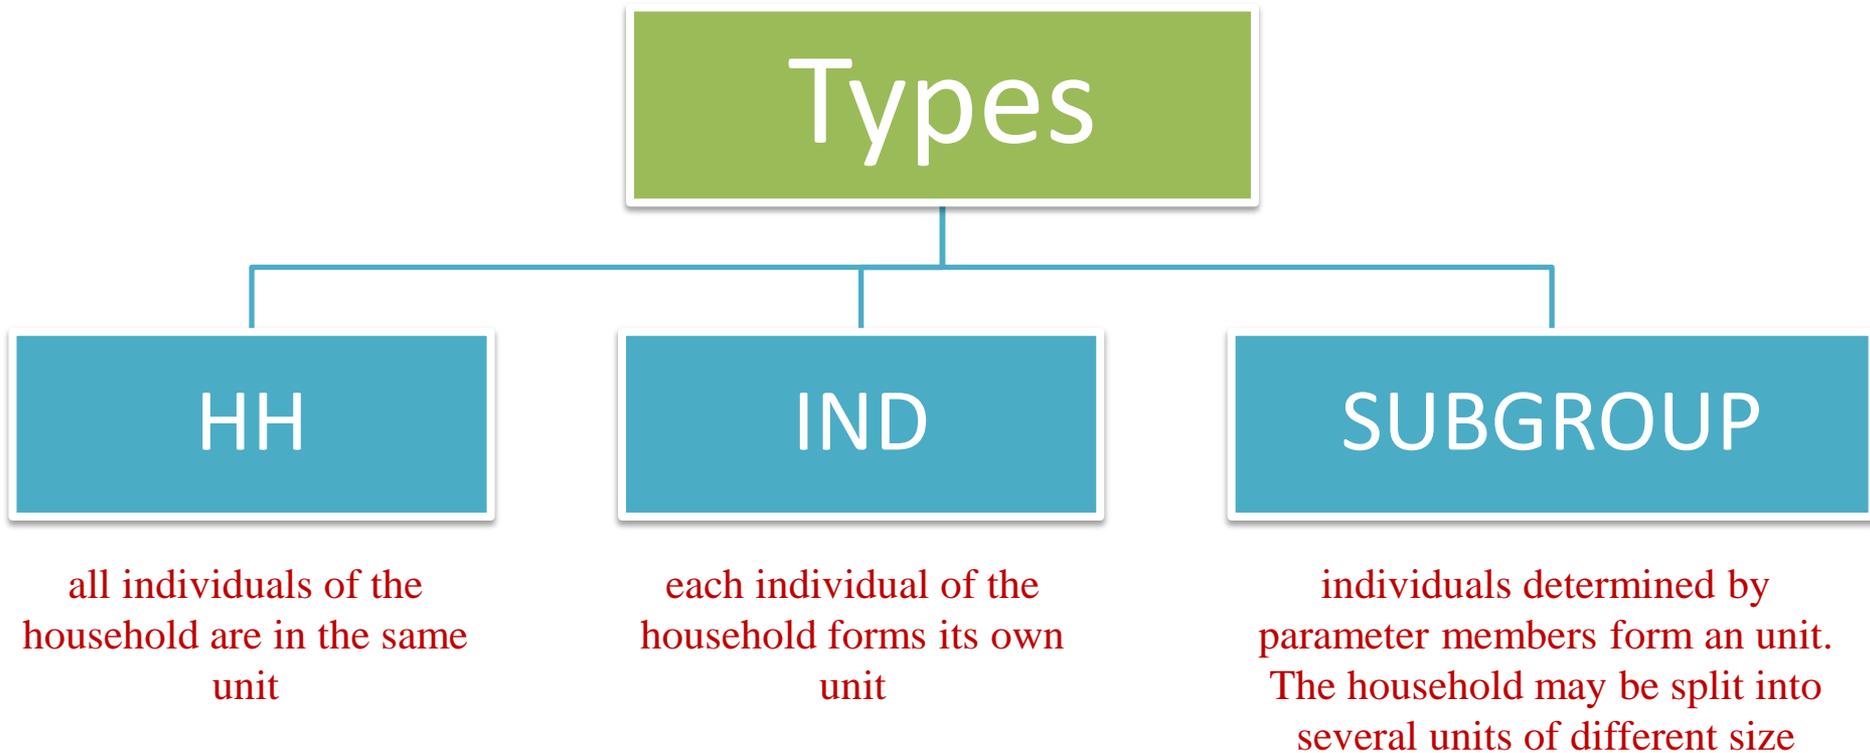

Family

P1 P2 Ch\_age=5

Fourth Tax unit =  
parents and children  
under 12

### 3. Tax units types

# 3. Tax units types

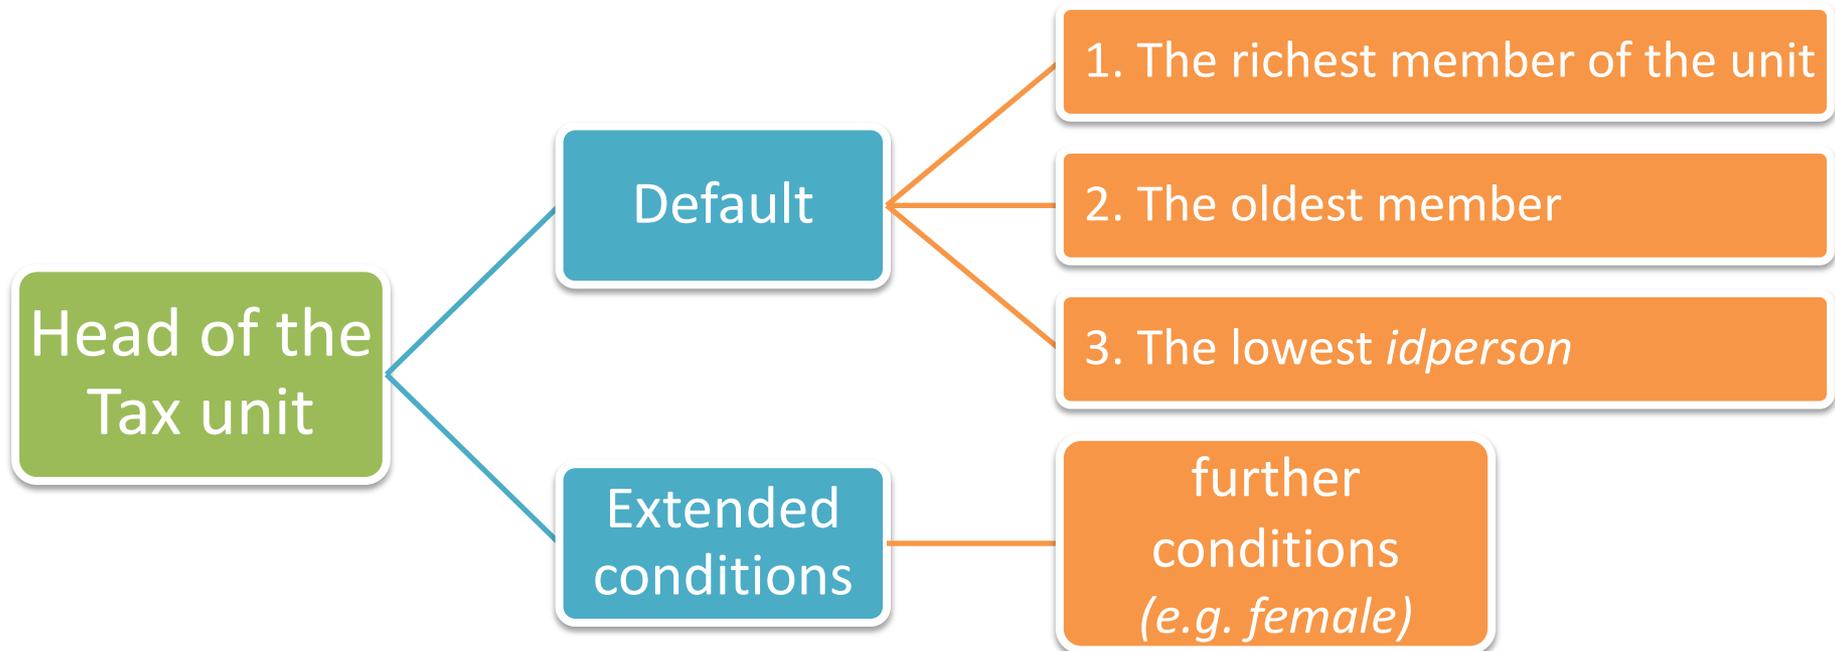

## Examples

Description	Different types of IDs					dag	Tax unit`s types		
	idhh	idperson	idpartner	idmother	idfather		Household	Individual	Family SUBGROUP
Couple with children	1	101	102	0	0	30	A	A	A
	1	102	101	0	0	28	A	B	A
	1	103	0	102	101	3	A	C	A
	1	104	0	102	101	1	A	D	A
Couple without children	2	201	202	0	0	56	A	A	A
	2	202	201	0	0	55	A	B	A
Lone parent	3	301	0	0	0	35	A	A	A
	3	302	0	301	0	6	A	B	A
Single	4	401	0	0	0	25	A	A	A
Two singles living together	5	501	0	0	0	22	A	A	A
	5	502	0	0	0	23	A	B	B
Family	6	601	602	606	0	48	A	A	A
	6	602	601	0	0	45	A	B	A
	6	603	0	602	601	20	A	C	A
	6	604	0	602	601	15	A	D	A
	6	605	0	602	601	10	A	E	A
	6	606	0	0	0	70	A	F	B

## 4. Members of the Tax unit

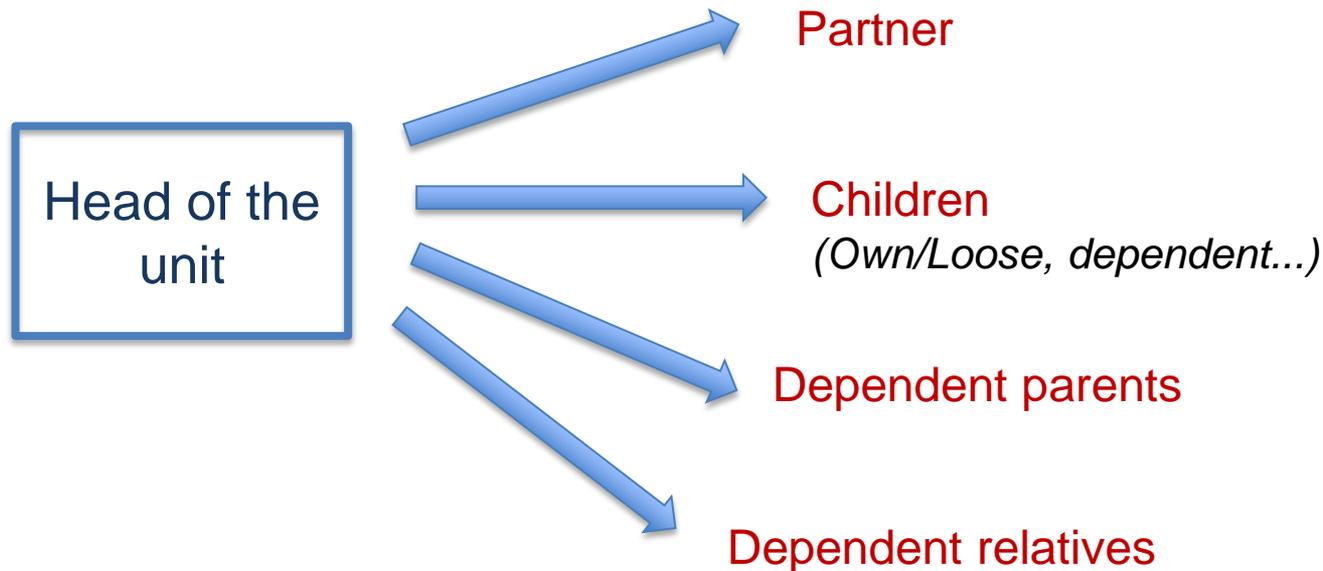

### Head of the unit

Members usually define relations with respect to the head of the Tax unit

## 4. Members of the Tax unit

**Members** usually define relations with respect to the head of the Tax unit

## 4. Members of the Tax unit

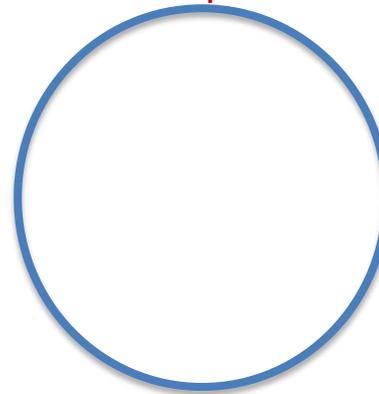

**Status** of each member, i.e. relationship with the Head of the unit, is defined by a special **Condition** parameter

Household

Family

Tax unit = two members  
who are partners

Head of the  
household + Partner

But who is  
Partner?  
How we define  
his Partner?

# 4. Members of the Tax unit

Condition parameters and default values fully documented in [Help](#)  
*(Summary of parameters for function DefTu)*

## Summary of parameters for function DefTu

allows for the definition of [assessment units](#).

Note that parameters may use variables with the prefixes "head:" or "partner:". These prefixes can be used with variables only, not with incomelists or queries. Also note that "{Default}" can be used to further define any default condition (as indicated in Default Value).

Function Specific Parameters

Name	Type	Optional	Single	Default	Description
Type	categorical	no	yes	n/a	Indicates the scope of the <a href="#">assessment</a> unit. Possible values: - HH: all members of the household belong to one unit. - IND: each members of the household forms an own unit. - SUBGROUP: unit members are specified as indicated in the parameter Members.
Name	string	no	yes	n/a	Name of the <a href="#">assessment</a> unit.
Members	string	yes	yes	n/a	Specifies which members of the household form a unit, if parameter Type is set to SOUBGROUP. Syntax: Status & Status & Status & ..., e.g. Partner & OwnChild.  Possible values for Status: - Partner: defined by parameter PartnerCond - OwnDepChild: defined by parameter OwnDepChildCond - LooseDepChild: defined by parameter LooseDepChildCond - LooseDepChild: defined by parameter LooseDepChildCond - OwnChild: defined by parameter OwnChildCond - DepParent: defined by parameter DepParentCond - DepRelative: defined by parameter DepRelativeCond  Note, that the Head is obviously always part of unit and (usually) relations are defined with reference to the Head.
HeadDefInc	incomelist	yes	yes	ils_OrigY	Incomelist used for determining who is the richest person in the <a href="#">assessment</a> unit, see parameter ExtHeadCond.
ExtHeadCond	condition	yes	yes	!{IsDepChild}	Condition further defining the head of the <a href="#">assessment</a> unit. The condition is &-linked with the following fixed head condition: {HeadDefInc>anyother:HeadDefInc}   (({HeadDefInc>=anyother:HeadDefInc} & {dag>anyother:dag})   (({HeadDefInc>=anyother:HeadDefInc} & {dag>=anyother:dag} & {idperson<anyother:idperson}))
PartnerCond	condition	yes	yes	{head:idperson=idpartner}	Condition defining who is a partner.
DepChildCond	condition	yes	yes	{0}	Condition defining who is a dependent child. The "real" default, i.e. if the parameter is not defined or set to n/a, is {0} (i.e. nobody is a child). However, setting the parameter to "{Default}" is interpreted as !{isparent}& {idpartner<=0}.

## 4. Members of the Tax unit

Some other examples of **Condition** parameters:

- **DepChildCond**: determines who is dependent child
- **OwnDepChild**: a son or daughter
- **LooseDepChild**: someone who is depend child but doesn't cohabit with parent/s

**{Default}**: default setting, can be combined with further specifications:

- conditions which refer to **income**
- conditions which refer to **partner`s income**
- conditions which refer to **age**
- conditions which refer to **number of children...**

**Queries** can be used to define income conditions

(e.g. *GetParentIncome*, *GetCoupleIncome*, ...)

# 5. How we create/name them?

*EUROMOD Modelling Conventions adjusted for this project*

Where?

Policy spine  
special policy **TUDef\_cc**

Inside some other policy  
using function **DefTu**

	Policy	Grp/No	SL_demo
1	Uprate_sl		on
2	ILDef_sl		on
