Research interests

Substantive research interests in the analysis of the distribution of income and its redistribution through taxation, social security and the labour market. Recent research includes work on inequality and poverty; income mobility and poverty dynamics; labour supply and social security benefit receipt. Research interests also in quantitative research methods for analysis of income distribution in particular, and applied microeconometrics in general, especially survival analysis.

Software

The following programs are all written for use with the software package Stata (<http://www.stata.com>), and the latest versions can be downloaded for free from within Stata. (Use the search command to ascertain download

location of latest version, which may either be the *Stata Journal* website or the Statistical Software Components website.)

sumdist	Calculates quantiles, quantile shares, and generalized Lorenz ordinates
xfrac	Calculates proportions of obs with income below specified fractions of mean income
ineqdeco	Inequality indices, with decompositions by population subgroup
ineqdec0	Inequality indices, with decompositions by population subgroup
ineqdecgini	Gini coefficient, with decomposition by population subgroup
geivars	GE inequality indices and asymptotic s.e.s (as per Cowell, <i>J. Econometrics</i> , 1989)
ineqfac	Inequality decomposition by factor components
povdeco	FGT poverty indices, with decompositions by population subgroup
glcurve	Generalised Lorenz and concentration curve ordinates and related graphs (with P Van Kerm)
svygei	GE inequality indices, with asymptotic standard errors, for complex survey data (with M Biewen)
svyat	Atkinson inequality indices, with asymptotic standard errors, for complex survey data (with M Biewen)
svylorenz	Lorenz and generalised Lorenz ordinates, and Gini coefficient, with asymptotic standard errors, for complex survey data
ineqrbd	Regression-based inequality decomposition (with C Fiorio)
dsginideco	Decomposition of inequality change into progressivity of income growth and reranking components (with P Van Kerm)
ineqord	Indices of inequality and polarization for ordinal data
smfit	Fit Singh-Maddala distributions by maximum likelihood
dagumfit	Fit Dagum distributions by maximum likelihood
gb2fit	Fit Generalised Beta of the second kind distributions by maximum likelihood
gb2lfit	Fit Generalised Beta of the second kind distributions by maximum likelihood (enhanced)
gammafit	Fit Gamma distributions by maximum likelihood (with N Cox)
gumbelfit	Fit Gumbel distributions by maximum likelihood (with N Cox)
betafit	Fit Beta distributions by maximum likelihood (with M Buis and N Cox)
dirifit	Fit Dirichlet distributions by maximum likelihood (with M Buis and N Cox)
paretofit	Fit Pareto distributions by maximum likelihood (with P Van Kerm)
fiskfit	Fit Fisk distributions by maximum likelihood (with M Buis)
weibullfit	Fit Weibull distributions by maximum likelihood (with N Cox)
invgammafit	Fit inverse Gamma distributions by maximum likelihood (with N Cox)
invgaussfit	Fit inverse Gaussian distributions by maximum likelihood (with N Cox)
mkbilogn	Creation of random bivariate lognormal variables
mvprobit	Multivariate probit estimation using simulated maximum likelihood (with L Cappellari)
pgmhaz8	Estimation by ML of discrete time hazard regression models with Gamma frailty. (Use pgmhaz for Stata versions 5–7.)
hshaz	Estimation by ML of discrete time hazard regression models with finite mixture frailty.
spsurv	Estimation by ML of discrete time split-population (cure) hazard regression models
hutchens	Hutchens ‘square root’ segregation index, with decompositions by population subgroup
samplepps	Draw random sample proportional to size, with or without replacement
mdraws	Create pseudo-random or Halton sequences, optionally with antithetic draws (with L. Cappellari)
_gmvnnp()	egen function for calculating multivariate normal probabilities using the GHK simulator (with L Cappellari), with C plugin
